

## Shell Thermo Premium – efficiency all the way down the line\*

### Shell Thermo Premium – the efficient way to heat

What you expect from a heating oil more than anything else is reliable warmth. Of course, a heating oil that can also reduce energy consumption and extend the life of your heating system at the same time is even better. And the new formula of Shell Thermo Premium has been developed to give you just that and more!

For example, thanks to our experience from international research and our new organic, ash-free combustion improver, new Shell Thermo Premium now helps to reduce soot formation. For you, that means it is not only possible to reduce your heating oil consumption but also to help to keep your equipment much cleaner.

### Shell Thermo Premium – helps protect your heating system

Shell Thermo Premium has been developed to help protect your entire heating system and to provide even more reliability. Because with the new Shell combustion improver the heating oil burns significantly cleaner. The overall formulation leaves fewer deposits in the tank, filter and nozzle of your system. In addition, a special corrosion inhibitor helps protect the metal parts of your equipment.

Filter after use of standard heating oil

Filter after use of Shell Thermo Premium

Both heating oils have been tested over the same period and under extreme conditions. \*When used in a modern condensing boiler as compared with a conventional heating system using standard heating oil.

### Shell Thermo Premium – for a better home environment

Even better, a unique reodourant also gives Shell Thermo Premium a pleasantly neutral smell. And that's a great benefit – especially with indoor tanks.

### With a unique new formula - Shell Thermo Premium for\*

- lower fuel consumption
- fewer deposits in tank, nozzle and filter
- protection for burner and boiler
- longer heating system life and less maintenance needs
- pleasantly neutral smell

This means the new, improved Shell Thermo Premium is our low-consumption heating oil that features even cleaner combustion.
